

FRUIT TREE PLANTING & CARE INSTRUCTIONS

- ☞ Plant this fruit tree in full sun. The average upright size of this tree is approximately 15' – 20' with a 10' – 15' spread.
- ☞ Dig a hole that's twice the size of the roots or original container. Place the tree in the hole, surround with soil and cover the roots to the same soil level as it was in the ground or original pot. Do not cover the bud union with soil. Add water and allow the soil to settle around the roots. Fill in any void areas with additional soil making sure that the roots are not exposed.
- ☞ Follow a regular watering schedule and feed with a fruit tree fertilizer. Check with your local nursery professional for additional care and feeding instructions.
